1- **Before establishing connection: prerequisites**

Some parameters must be identical on both sides (Master & Slave):

- Bandwidth: Launch a bandwidth test, for example http://www.speedtest.net/fr/.

  Now, the best Upload will be the Master.

- AIRAC

- Flight plans in the FMS Plans folder.

- "Runway follows the terrain" should be the same "ON" or "OFF" in X plane graphics setting

- Mesh

- Sceneries

- Same location (gate or runway)

2-**After connection has been established**

- Do not blind any axis for the Mixture lever (mouse only, by pilot or copilot).

- Thread is here: http://forums.x-plane.org/index.php?/forums/topic/94150-smartcopilot/
